

ParcelPoint® for Oil & Gas

With more than 129 million parcels, ParcelPoint is the most comprehensive parcel database in the U.S.

X Marks the Spot

Property location data is critical information for upstream and midstream oil and gas operations. Understanding actual parcel boundaries significantly improves the accuracy of any property location data. ParcelPoint® captures boundary and centroid data, including ownership information, for more than 2,200 counties and townships, accounting for over 129 million parcels nationwide.

Whether you are focused on land acquisition for exploration and production, addressing right-of-way issues for pipelines and transportation, or need to better manage your assets in the field, ParcelPoint is an unparalleled solution that is accurate, current and comprehensive.

Accuracy Matters

ParcelPoint is a patented geospatial solution that enables users to access the highest level of positional accuracy for developing location-based solutions, managing assets, maximizing efficiency and enhancing business analytics. With ParcelPoint, users have access to:

- ▶ Parcel Boundaries
- ▶ Parcel centroid defined by actual latitude/longitude
- ▶ APN or tax ID number
- ▶ Property address or SITUS
- ▶ Parcel ownership data

The defining elements of ParcelPoint create a powerful data set for unparalleled positional accuracy.

KEY BENEFITS

ParcelPoint allows oil and gas managers to quickly determine parcel boundaries and access ownership information to shorten cycle time-to-market, enhance business processes, improve decision making and streamline asset management.

GIS Departments:

- Create a foundation for proprietary spatial databases
- Determine polygon locations and surface ownership
- Create accurate forecasts and budgets

Engineering Departments:

- Determine the most efficient, cost-effective routes for transporting assets

Right-of-Way Departments:

- Determine parcel ownership to procure leases
- Assess best locations for pipeline placement

Land Acquisition and Real Estate Departments:

- Find parcel and ownership information quickly to pursue new leases

Compliance Departments:

- Ensure regulatory compliance across all areas of the company

Tax Departments:

- Use data to more effectively estimate and validate tax bills on field assets

Unlike other solutions that require you to buy additional software or use a proprietary interface, ParcelPoint is platform-independent. The data is delivered in a shapefile that allows you to access the data via the platform you prefer.

Keep Current

Information is only useful if it's up-to-date. CoreLogic is committed to keeping its national parcel database current, so you can have confidence in the data you're using. ParcelPoint is updated quarterly with both new parcel information and updates to existing parcel data. Parcels are constantly changing and CoreLogic strives to keep up so you can stay a step ahead.

Coverage Counts

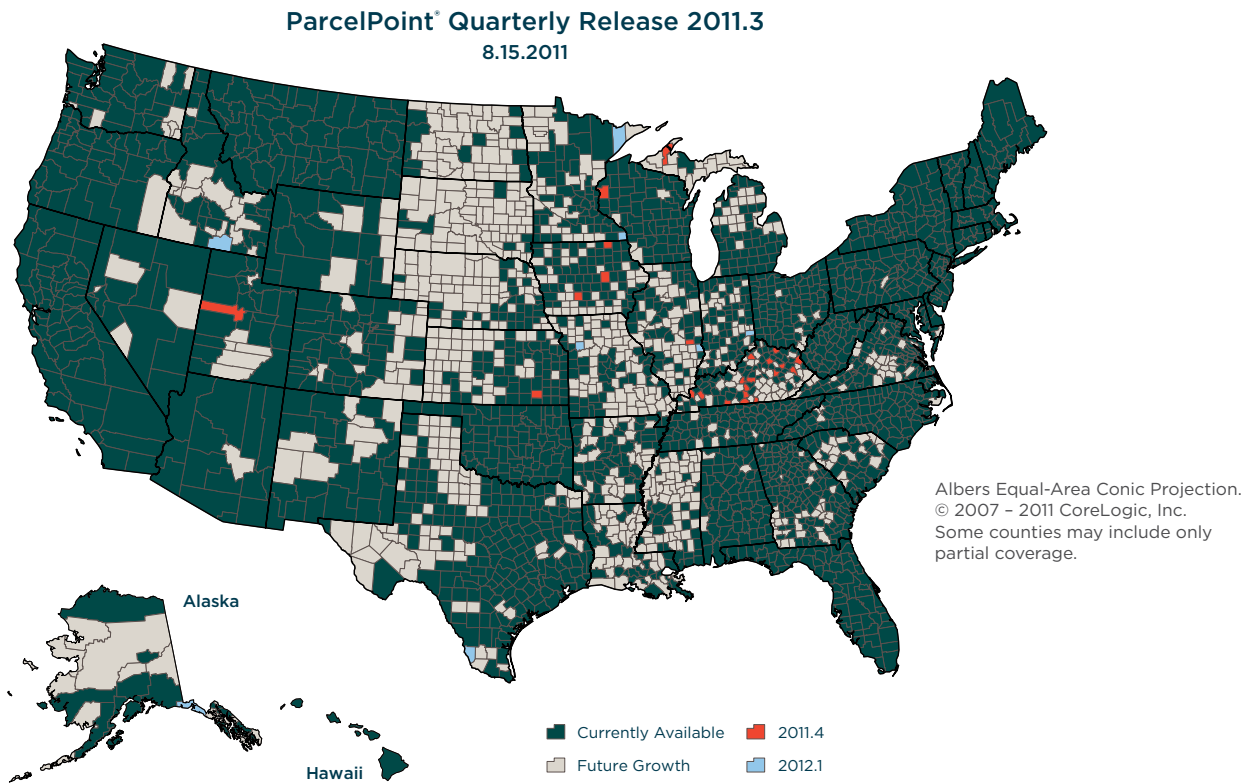

With over 129 million parcels in its database, CoreLogic offers the most comprehensive database in the U.S. Through ParcelPoint you can harness this breadth of data to meet a variety of business needs.

Leverage Experience

CoreLogic is America's leading provider of business information, and over 90 percent of real estate transactions are touched by at least one CoreLogic division. Through its expertise in location intelligence, CoreLogic utilizes its resources to expand the spatial capabilities of its customers. By leveraging precision geocoding technology and advanced analytics, oil and gas companies can reduce time to market, maintain business continuity and improve operations.

Web Mapping Service

CoreLogic now provides several of its property and hazard data layers via Web Mapping Service (WMS). WMS requests generate a visual response in one or more geo-registered map images (in formats such as JPEG, PNG, etc.) that can be displayed in a browser application, such as OpenLayers, Bing™ or Google Maps API. The interface also allows for the transparency of returned image layers from multiple servers. CoreLogic data layers available over WMS currently include ParcelPoint, flood, dams, levees, and subbasin and subwatersheds. Future releases will include storm surge, wildfire and additional CoreLogic layers.
