CoreLogic® National Foreclosure Report

MARCH 2014

FORECLOSURES - NATIONAL OVERVIEW THROUGH MARCH 2014

- ▶ The Foreclosure Inventory Is Down 5.1 Percent Month Over Month
 - ▶ The Seriously Delinquent Rate Is at 4.7 Percent for the First Time Since October 2008
 - ▶ The Foreclosure Rate Is Back to November 2008 Levels
-

COMPLETED FORECLOSURES

48,000	↑ 5.9%	↓ 10.0%
IN MARCH 2014	COMPARED TO FEBRUARY 2014	COMPARED TO MARCH 2013

A CoreLogic analysis shows 48,000 foreclosures were completed in March 2014, a 10 percent year-over-year decline from 53,000 in March 2013. By comparison, before the decline in the housing market in 2007, completed foreclosures averaged 21,000 per month nationwide between 2000 and 2006. On a month-over-month* basis, completed foreclosures increased 5.9 percent. Completed foreclosures are an indication of the total number of homes actually lost to foreclosure.

SINCE THE FINANCIAL CRISIS BEGAN IN SEPTEMBER 2008, APPROXIMATELY

5 MILLION

FORECLOSURES HAVE BEEN COMPLETED

“The inventory of homes in foreclosure and serious delinquency status are back to 2008 levels, yet remain elevated from a historical perspective. While getting healthier, the housing market is a long way from being fully recovered. By way of comparison, distressed stock inventories are more than three times higher than the levels of the early 2000s, before the most-recent housing boom and subsequent financial crisis.”

Dr. Mark Fleming, chief economist for CoreLogic

*February data was revised. Revisions with public records are standard and to ensure accuracy, CoreLogic incorporates newly released data to provide updated results.

NATIONAL FORECLOSURE INVENTORY

↓ **37%**

COMPARED TO MARCH 2013

↓ **5.1%**

COMPARED TO FEBRUARY 2014

Approximately 720,000 homes in the United States were in some stage of foreclosure as of March 2014, compared to nearly 1.1 million in March 2013, a decrease of 37 percent. This was the 29th consecutive month with a year-over-year decline. As of March 2014, the foreclosure inventory represented 1.8 percent of all homes with a mortgage compared to 2.8 percent in March 2013.

THE 12-MONTH SUM OF COMPLETED FORECLOSURES IS AT LOWEST POINT SINCE DECEMBER 2007 AND HAS DECLINED EVERY MONTH FOR THE PAST 27 CONSECUTIVE MONTHS

“The pathway to a full recovery in housing is proving to be a very long one, but lower distressed stock levels are one clear indicator that we continue to make slow-but-steady progress. Most states have made good progress clearing their foreclosure inventories, but states that have a longer judicial foreclosure process, such as Florida, New Jersey and New York, continue to struggle with elevated distressed stock inventories.”

Anand Nallathambi, president and CEO of CoreLogic

CORELOGIC NATIONAL FORECLOSURE REPORT METHODOLOGY

The data in this report represents foreclosure activity reported through March 2014.

This report separates state data into judicial versus non-judicial foreclosure state categories. In judicial foreclosure states, lenders must provide evidence to the courts of delinquency in order to move a borrower into foreclosure. In non-judicial foreclosure states, lenders can issue notices of default directly to the borrower without court intervention. This is an important distinction since judicial states, as a rule, have longer foreclosure timelines, thus affecting foreclosure statistics.

A completed foreclosure occurs when a property is auctioned and results in the purchase of the home at auction by either a third party, such as an investor, or by the lender. If the home is purchased by the lender, it is moved into the lender's real estate owned (REO) inventory. In "foreclosure by advertisement" states, a redemption period begins after the auction and runs for a statutory period, e.g., six months. During that period, the borrower may regain the foreclosed home by paying all amounts due as calculated under the statute. For purposes of this Foreclosure Report, because so few homes are actually redeemed following an auction, it is assumed that the foreclosure process ends in "foreclosure by advertisement" states at the completion of the auction.

The foreclosure inventory represents the number and share of mortgaged homes that have been placed into the process of foreclosure by the mortgage servicer. Mortgage servicers start the foreclosure process when the mortgage reaches a specific level of serious delinquency as dictated by the investor for the mortgage loan. Once a foreclosure is "started," and absent the borrower paying all amounts necessary to halt the foreclosure, the home remains in foreclosure until the completed foreclosure results in the sale to a third party at auction or the home enters the lender's REO inventory. The data in this report accounts for only first liens against a property and does not include secondary liens. The foreclosure inventory is measured only against homes that have an outstanding mortgage. Homes with no mortgage liens can never be in foreclosure and are, therefore, excluded from the analysis. Approximately one-third of homes nationally are owned outright and do not have a mortgage. CoreLogic has approximately 85 percent coverage of U.S. foreclosure data.
