

Risk assessment you can rely on

Build Confidence in Your Portfolio with RiskMeter

2017 was a wakeup call for the P&C insurance industry with thousands of homes submerged under water or burned to ashes. More than ever, it has become clear that the tools used to assess risk need to be able to keep up with the pace of Mother Nature.

RiskMeter empowers underwriters, brokers, agents, and other businesses with comprehensive natural hazard risk information at your fingertips. With over 70 natural hazard risk and building specific reports and backed by the power of PxPoint™, our enterprise-level geocoder, you can be confident you're relying on complete, current, and connected information which both keeps costs down and speeds your workflow up.

Don't Leave Things Up to Chance

RiskMeter enables better risk assessment, providing normalized scores for a variety of reports to help understand where properties are vulnerable. Instantly view premium natural hazard data which offers the ability to view risk all the way down to the structure level.

How Does it Work?

Three simple steps and you'll have the information you need at your fingertips.

1. Where?

Enter an address in the search bar.

2. What hazards?

Select from an extensive list of peril-based hazard solutions.

3. Learn

The flexibility to view the most important data points or view the full set of results for more granular analysis.

HIGHLIGHTS
