

# CreditXpert®

## Uncover More Opportunities, Close More Loans

CoreLogic® offers CreditXpert®, a suite of software solutions that helps eliminate guesswork by providing helpful insights, predictions, and more thorough credit analysis.

### Credit Assure™

Credit Assure automatically scans every credit report and displays potential score improvement by bureau on the cover page of the credit report. You can then click through to order a CreditXpert Wayfinder report that shows the potential score increase(s) identified by Credit Assure.

### CreditXpert Wayfinder

CreditXpert Wayfinder's intuitive interface can evaluate hundreds of different options to help eliminate guesswork and determine the best course for achieving a desired credit score outcome through pay downs, balance transfers and opening new accounts.

CreditXpert Wayfinder provides a custom plan for each borrower that helps to identify the changes that a borrower can make to their credit profile to reach the score band they desire, a summary of Rapid Rescore actions to get the fastest updates, and actions to avoid that may negatively impact their score.

### CreditXpert What-If Simulator™

CreditXpert What-If Simulator's capabilities let you test your options and simulate combinations of your own. Scores are updated in real-time with each change of action, so you can quickly identify which updates will have the most impact.
