Upcoming Transition to the New Version of Standard Flood Hazard Determination Form

Following our system release the evening of September 7, you will receive the new version of the Standard Flood Hazard Determination Form (the "Form") with new flood determination orders and with existing determinations printed or displayed from our website. As previously [announced](#), the new version of the Form (FEMA Form 086-0-32) has been made available on FEMA's [website](#). As a reminder, according to FEMA the previous version of the Form (with the May 30, 2015 expiration date) can be used during a currently undefined transition period.

Among the [changes](#) is that the Lender ID No. field (Section I, Box 3) is now identified as optional. With this change, you might decide that this is no longer a data element that you want to provide to us to appear on the Form. Please consult with your Legal or Compliance Department, or your Regulator, before making any change.

Also, with this transition you will begin to see the LOMC Case No., in addition to the LOMC date, in Section II.B, Box 3 when a flood determination is based upon an LOMC. The purpose of the case number is to further identify which FEMA letter (Letter of Map Amendment or Letter of Map Revision) was relied upon for the flood determination, when applicable. The case number, which may not be available for certain older LOMCs, does not have an impact on the flood insurance requirements, either at origination or during the servicing of the loan, and is for identification purposes only. FloodCert.com users can access copies of the LOMC that was relied upon for the flood determination by clicking on the "FEMA Letter(s)" hyperlink on the Order Summary screen.
