 - Over 2 MM* active lines/loans and 41.5 MM* historically
 - History from 2002
 - Optional Integrated analytics modules
 - Sr. Lien Module

* As of February 2022

Foundation Data

Both the Loan-Level Market Analytics and Loan-Level Home Equity datasets are built on a foundation of dynamic CoreLogic mortgage or home equity origination and performance data which has been contributed by servicers. Provided in text files delivered by FTP, these data include all standard loan or line origination metrics as well as monthly status and performance updates. These foundation files also include key CoreLogic-derived analytics.

Five Integrated Analytics Modules

Five optional integrated modules supply new data and analytics, thus extending and elaborating upon the standard origination and performance data. This leads to a more focused, three-dimensional perspective. Together, they create a 360° view of portfolio risk that includes loan-level performance, property, and consumer data.

- **NEW! Loan-Level Market Analytics Forbearance**

- Designed in partnership with contributing servicers, the forbearance reporting was initiated at the onset of the COVID-19 pandemic and is now included as part of the base Loan-Level Market Analytics offering.

- **Loan-Level Market Analytics Loan Modification**

- identifies changes to interest rates, payments and loan balance resulting from loan modifications

- **Supplemental Loan Analytics**

- AVM and HPI generated property valuations, CLTV, current open liens, equity, and dwelling metrics
- Alternatively sourced data including loan purpose, occupancy, product details, piggyback junior lien indicators, modification data, notice of default data, and disposition data

- **Loan-Level Home Equity Sr. Lien Module**

- combines matched home equity line and loan contributed servicing data to the property record for senior lien perspective. Identifies associated Loan-Level Market Analytics loans to the Loan-Level Home Equity dataset

- **Loan-Level Market Analytics Borrower Credit Insights**

- anonymized borrower credit information powered by TransUnion, including credit scores, credit limits, delinquencies, utilization, predictive scores, etc.

powered by 
TransUnion

Loan-Level Market Analytics and Loan-Level Home Equity represent the new norm for extracting mortgage or home equity intelligence. They are built on the premise that risk analysts achieve quicker and more accurate results when they leverage "ready" data. Rather than having to gather, manipulate, and standardize mountains of raw data to create the information they seek, analysts can leverage Loan-Level Market Analytics and Loan-Level Home Equity instead.

The Data You Depend On

Loan-Level Market Analytics and Loan-Level Home Equity draw on many types of CoreLogic data, from all-inclusive mortgage and home equity and property intelligence, to valuation metrics, in-depth ownership information, neighborhood metrics, and anonymized consumer data. Loan-Level Market Analytics and Loan-Level Home Equity then analyze the data in order to extract the facts from the background noise, organizing the results to simplify and clarify understanding.

Loan-Level Market Analytics and Loan-Level Home Equity results are shaped to ensure accuracy, improve data management processes, and reduce the extra effort analysts spend manipulating raw data solutions.
