

Mortgage Insurance Hub

Identify the Best Mortgage Insurance Option in Any Scenario

The CoreLogic® Mortgage Insurance (MI) Hub takes the hassle out of choosing a mortgage insurance policy by providing an intelligent selection of mortgage insurance policies on a per loan basis. MI Hub leverages real-time risk-based pricing quotes gathered from all insurers combined with configurable business rules tuned to your organization, so you get the best insurance policy based on the unique needs of your client.

Get the optimal solution for any borrower scenario

MI Hub can provide you with a variety of options to streamline your mortgage insurance selection process, without incurring significant training costs. By choosing MI Hub over the traditional practices of going from one provider to another looking for the best deal, you get the following benefits:

- A single product per MI company or multiple available products such as lender-paid mortgage insurance (LPMI), borrower-paid mortgage insurance (BPMI), Single Premium and more
- Eligibility rationale can be included for ineligible products, along with detailed explanations when insufficient information is provided to quote a price
- Additional calculations, including five-year housing expense costs and mortgage insurance premiums blended with taxes
- PDF of the selected rate quote available with every order

Configurable rules engine can handle multiple selection criteria

In some scenarios, choosing the lowest priced insurance option isn't always the best solution. With MI HUB, the selection can be optimized to meet more complex goals, such as minimizing debt-to-income (DTI), loan-to-value (LTV), or projected housing expense costs. It can also help you allocate your MI portfolio among vendors to meet quotas and risk management objectives.

Powered by an intelligent decision engine, MI Hub rules can be configured to employ a multitude of selection criteria.
