

# When Disaster Strikes, Get there First

While the economy and the COVID-19 pandemic are impacting the business of installing new roofs, there is no stopping mother nature from damaging existing roofs. Hail and wind storms almost always cause roof damage. Repairing roofs following these events can keep roofers who can get to the impacted homeowners first, busy and profitable.

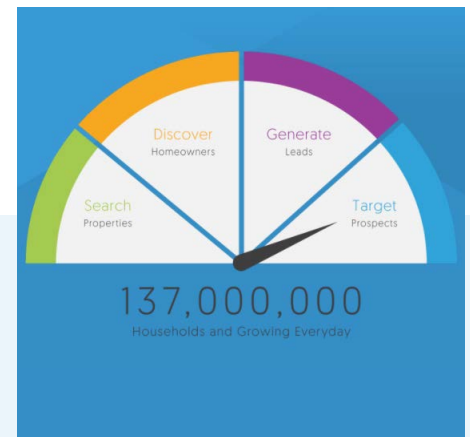

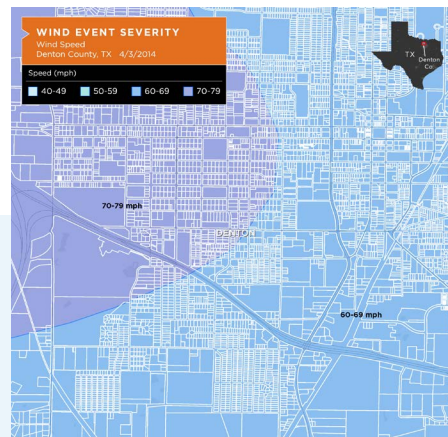

Imagine if, following a hail or wind storm, you could precisely identify the impacted neighborhoods and the intensity of

every storm. And, imagine if you had the name and address of the homeowners affected in those neighborhoods.

With CoreLogic® property, homeowner and demographic data, both can now be yours.

For a limited time, we are offering a bundled solution that combines our industry-leading wind and hail verification reports with 33,000 leads through our ListSource™ product.

*For more information call 888.929.4245 option 2 for sales*

- 14 levels of color-coding identify hail size ranging from 3/4" to 4+"
- Available for local region, state, multiple states, or entire U.S.
